

EXECUTIVE SUMMARY

Founder, AI Systems Architect, and Deep Tech Engineer building sovereign AI infrastructure, autonomous multi-agent orchestration frameworks, and high-concurrency distributed backend systems from first principles. Founder of **Varellen Technologies** (enterprise systems engineering & scalable platforms) and **Norveth** (norveth.app — AI website intelligence & Model Context Protocol tooling). Computer Science & Distributed Systems background at **VIT-AP University** (2024–2028).

VENTURE LEADERSHIP & SYSTEMS ENGINEERING

Varellen Technologies — Founder & Chief Executive Officer2024 – PRESENT | ENTERPRISE & SYSTEMS

- Guiding venture roadmap and system design for enterprise digital platforms, autonomous AI workflow pipelines, and high-throughput cloud infrastructure.
- Architected fault-tolerant microservice meshes with sub-millisecond API dispatch, zero-trust security postures, and automated Docker/K8s CI/CD pipelines.

Norveth — Founder & Systems Architect (norveth.app)2024 – PRESENT | AI INTELLIGENCE

- Architected full-lifecycle website intelligence platform utilizing **real Chromium headless rendering**, **Model Context Protocol (MCP)** server integration, and automated OWASP Top 10 security/performance diagnostics.
- Engineered distributed scan workers, deterministic AI code remediation pipelines, and developer CLI tools for code-level diagnostics.

Independent Systems Engineering & Strategic Advisory — Principal Technical Consultant2024 – PRESENT | GLOBAL REMOTE

- Delivering high-concurrency backend APIs, custom multi-agent orchestration frameworks, and mission-critical database designs for international founders.
- Conducted empirical research in agent convergence, vector embedding spaces, and proactive cyber attack surface mapping (OSPRED framework).

FLAGSHIP ARCHITECTURES & SOFTWARE SYSTEMS

Multi-Agent Orchestration PlatformAutonomous AIPython, FastAPI, LangChain, Redis, Vector DBs

- Autonomous execution kernel where specialized agent personas collaborate on complex, multi-stage workflows with deterministic routing, shared vector memory persistence, and asynchronous tool invocation.

AI Workflow Automation EngineEnterprise AutomationNext.js 16, Node.js, PostgreSQL, Docker, WebSockets

- Visual pipeline compiler translating high-level natural language instructions into distributed, fault-tolerant worker execution graphs with live WebSocket telemetry.

OSPRED Autonomous Security EngineCybersecurityPython, FastAPI, Docker, Linux Hardening, CVE Feeds

- AI-assisted security platform executing continuous vulnerability surface discovery, automated threat intelligence synthesis, and zero-trust Linux server hardening.

Neural Knowledge Retrieval Engine & ShadowForge IntelligenceRAG & Web3Python, ChromaDB, OpenAI, Solidity, Web3.js

- Sub-millisecond dense vector RAG engine over unstructured corpora alongside an EVM ledger intelligence engine for heuristic pattern recognition & smart contract audits.

TECHNICAL ARSENAL & DOMAIN MASTERY

AUTONOMOUS AI:Multi-Agent Swarms, Model Context Protocol (MCP), LangChain, LlamaIndex, RAG Pipelines, Vector DBs (ChromaDB, Pinecone), Prompt Engineering.

LANGUAGES:Python, TypeScript, JavaScript, Go, Rust, Java, C/C++, SQL, Bash/Shell, Solidity.

BACKEND & INFRA:FastAPI, Node.js, Express, Next.js 16 (App Router), React 19, PostgreSQL, Redis Streams, MongoDB, Docker, Kubernetes, AWS, Nginx, CI/CD.

SECURITY & WEB3:OWASP Top 10 Hardening, Attack-Surface Mapping, Zero-Trust Architecture, EVM Smart Contracts, Cryptographic Protocols, Network Triage.

EDUCATION & COMPETITIONS

VIT-AP University — B.Tech in Computer Science & Engineering2024 – 2028 | ANDHRA PRADESH, INDIA

Core Focus: Distributed Systems, Operating Systems Internals, Advanced Algorithms, Computer Networks, Database Architecture, Machine Learning.

Hackathons: Google Agentic AI Hackathon, Slack AI Hackathon, Qwen Global Hackathon, Bank of India National Hackathon.
