SUMMARY

Full stack developer and AI systems engineer building production-ready software — from web applications and scalable backend platforms to AI automation systems and multi-agent orchestration frameworks. Founder of Norveth, an engineering-first initiative focused on intelligent software and developer infrastructure. Focused on systems that are scalable, maintainable, secure, and automation-first.

EXPERIENCE

- Founder & Systems Architect — Norveth**2024 – Present
 - Founded an engineering-first technology initiative building intelligent software, AI automation platforms, developer infrastructure, and scalable digital products.
 - Architected 30+ technical designs spanning multi-agent AI ecosystems, backend platforms, and security tooling.
- Independent Full Stack Developer**2024 – Present
 - Delivered full-stack web applications, backend APIs, and database architectures for clients across multiple domains.
 - Built AI-powered automation workflows, SaaS platforms, and developer tooling with production deployments.
- Technical Researcher & Writer**2023 – Present
 - Independent research across AI and multi-agent systems, distributed systems, cybersecurity, and Web3 architecture.
 - Author technical notes, engineering essays, and software documentation.

SELECTED PROJECTS

- Multi-Agent Orchestration Platform** — AI orchestration framework where specialized agents collaborate on complex workflows autonomously — context routing, memory persistence, execution validation. *(Python, FastAPI, LangChain, Redis)*
- AI Workflow Automation Dashboard** — Visual workflow builder for AI-powered business automation with real-time execution monitoring. *(Next.js, Node.js, PostgreSQL, Docker)*
- Personal Knowledge Engine** — Semantic search engine powered by embeddings and Retrieval-Augmented Generation. *(Python, ChromaDB, OpenAI)*
- OSPRED Security Framework** — Experimental AI-assisted cybersecurity platform for security automation and vulnerability research. *(Python, FastAPI, Docker)*
- SaaS Analytics Platform** — Analytics dashboard with user tracking, funnels, and real-time events over WebSockets. *(Next.js, Express, MongoDB)*

TECHNICAL SKILLS

Languages	Python, TypeScript, JavaScript, Java, C, C++, SQL, Bash, Rust, Go
Frontend	React, Next.js, Tailwind CSS, Redux, HTML5, CSS3
Backend	Node.js, Express, FastAPI, Django, REST, GraphQL, WebSockets, gRPC, Microservices
AI / ML	AI Agents, Multi-Agent Systems, LangChain, RAG, Prompt Engineering, Vector Search
Databases	PostgreSQL, MongoDB, MySQL, Redis, SQLite, Supabase, Prisma ORM, Vector DBs
DevOps	Linux, Docker, Kubernetes, AWS, CI/CD, Git, Nginx, Terraform
Security	OWASP, Linux Hardening, Network Analysis, Cryptography, Vulnerability Assessment

EDUCATION

- B.Tech, Computer Science & Engineering — VIT-AP University**Expected 2028
- Relevant coursework: Operating Systems, Networking, Machine Learning, Software Engineering, Distributed Systems.

ACTIVITIES

Hackathons: Google Agentic AI, Slack AI, Qwen, Bank of India • Open-source contributor • Technical writing • CTF practice & security research
